

Information Security Data Protection

At a Glance

- Increase visibility, confidentiality and control of your data.
- Limit the financial and business continuity impacts of a data breach.
- Increase regulatory compliance.
- Decrease the time required to resolve data security incidents.

How Well Do You Know Your Data?

Forsythe knows from experience that many organizations are not fully aware of how much data they have, where it is stored or who has access to it. Our independent, holistic services and technology solutions enhance the visibility, confidentiality and control of your organization's sensitive data—by optimizing your existing tools and helping you identify best-fit solutions to remediate deficiencies. Forsythe's approach to Data Protection provides your organization with significant benefits that are unique in the industry—improving data protection and technology performance, while realizing measurable reductions in total cost of ownership.

Our Approach

Forsythe's vendor-independent approach to the technology marketplace and decades of security experience empower your organization to balance data protection requirements with demands for access, the need for privacy and changing regulatory requirements. We help your organization move from the initial phases of risk identification—through vendor and technology selection—to the implementation of technology and process solutions.

Forsythe Data Protection services include:

Data Protection Strategy Assessment – A starting point that validates data risks, makes recommendations and presents a project plan to help your organization get faster results from remediation processes.

Data Protection Program Development – A review and further development of the processes supporting data protection, such as incident response planning, information security policy drafting, data classification and user awareness training and validation.

Technology Tuning – A technical validation that policies and processes have been correctly implemented for the security controls your organization has in place. This service ensures that products continue to serve their purpose and that their configurations evolve as risks and controls change over time.

Technologies That Enhance Your Security

Forsythe will help you take tactical steps, make decisions and set priorities to provide your organization's security program with long-term benefits.

In addition to our comprehensive Data Protection services, Forsythe can help you implement key technologies including:

Data Loss Prevention (DLP) – A technology that helps your organization gain enterprise visibility and develop effective processes to control data transmission, creation and use.

Endpoint Security – These solutions include many types of technologies working together to decrease risk. Anti-virus protection is complemented by application control, device control and forensic tools, as well as other technologies.

Enterprise Encryption and Key Management – Data confidentiality is enhanced by pervasive encryption with efficient key recovery and rotation.

Database Monitoring – Monitoring software audits, scans and protects an enterprise’s critical structured data to prevent data loss or corruption.

Strong Authentication – Numerous technologies are available to enhance data access protection beyond the use of standard passwords, including one-time passwords, biometrics and phone-based authentication.

Wherever You Are—Forsythe Will Meet You There

Forsythe’s goal is to enable your organization to invest in solutions that provide the most value for your business. We focus on the overall maturity and health of your security program—where it is today and where you would like it to be in the future.

Based on the maturity of your organization’s security program and what you want to accomplish, Forsythe can provide support at any point in the remediation process. Using our Optimized Security Model, we help you make sense of the marketplace, narrowing the field to those solutions that meet your needs most effectively and efficiently.

Forsythe’s process uses proprietary tools and methodologies, including the Forsythe Accelerated Security Tool (FAST) and our state of the art Technology Evaluation Center, to help your organization reduce exposure to security breaches, save time and resources and reduce total cost of ownership.

Get the Forsythe Advantage.

For nearly 40 years, Forsythe has delivered forward-thinking advice, technology, and operation-enhancing solutions. As an infrastructure integrator, Forsythe can help you address every aspect of your architecture, including how new solutions may affect the bigger picture. Working with every major provider, Forsythe acts as your single point of contact for managing the cost, effectiveness, and risk related to your information systems.

Let Forsythe Help.

Business objectives—and business issues—don’t exist in a vacuum. Forsythe identifies and addresses IT interdependencies to deliver solutions that work across your enterprise. Call us today.
