

From the boardroom to the data center, Forsythe helps organizations solve business problems through technology.

As an IT infrastructure integrator, we help customers improve performance, manage risk, and reduce cost.

We can help you assess, design, procure, build and support your IT infrastructure throughout the technology lifecycle. We identify and address IT interdependencies to deliver solutions that work across your enterprise.

With our independent, multi-vendor perspective, we help you simplify IT acquisition and integration in today's complex infrastructure marketplace.

The Forsythe Story.

Since 1971, Forsythe has earned the trust of many of the top names in business nationwide. Our team is comprised of experts in every facet of IT strategy, to help clients build cohesive infrastructures that will serve them well over the long term.

We work with organizations across all industries, including many Fortune 1000 companies. Forsythe acts as an independent advisor, offering a full range of consulting services that focus on meeting organizations' larger business objectives. In addition, we act as a single technology

resource, providing everything from assessment and design to products, financing, and portfolio management.

Today, Forsythe is employee-owned and more committed than ever to developing solid relationships with partners and clients.

Forsythe has achieved 36 years of consecutive profitability by adapting to meet the changing needs of business. As a result, our customers and partners know they can count on an enduring relationship that will see them through the long run.

Forsythe has more than 50 offices throughout the United States and Canada.

Forsythe helps you meet key business objectives, including:

Aligning & Operating IT - Helping you ensure that IT services add value and meet business objectives cost-effectively.

Managing Risk - Ensuring business continuity and information security.

Protecting and Managing Data - Developing a successful information management and storage framework that satisfies all levels, from executives to system administrators.

Optimizing the Data Center - Ensuring that data centers are located and designed to meet ongoing business goals.

Enhancing IT Infrastructure - Taking an infrastructure-wide view to help you get the most out of your IT investment, and positioning your organization for future growth.

Sourcing and Managing Technology - Helping you take a proactive role in sourcing, financing and maintaining technology to minimize cost and risk.
