Hybrid Disaster Recovery Solutions

At a Glance:

- Help achieve stated RTOs and RPOs
- Ensure the proper balance of costs and risk
- Create a custom solution based on your organization's specific needs

Balancing Disaster Recovery Costs and Risk

Your organization's reliance on IT is growing stronger by the day. Once considered something nice to have by upper management, disaster recovery solutions are now absolutely critical to the future of your business. Recovery Time Objectives (RTOs) and Recovery Point Objectives (RPOs) are being squeezed to the point where they are measured in terms of hours or minutes instead of days or weeks. As a result, many organizations are being forced to reevaluate their disaster recovery strategies.

Some companies are taking advantage of cost-effective technology such as virtualization and storage mirroring to bring their recovery solutions in-house. While these options offer the most control and flexibility, the costs can be prohibitive. On the other hand, outsourcing to a hot-site vendor exposes you to risks that can seriously jeopardize your ability to meet stated RTOs and RPOs. So what is the best option?

Forsythe's Hybrid Solutions

Hybrid solutions combine internal and outsourced recovery options to bring you the best of both worlds. Knowing that

every organization is different, and that what works for one may not be right for another, Forsythe can help you create a hybrid solution that meets your specific needs.

As the leader in hybrid modeling, Forsythe can help your organization build a solution that achieves your optimal balance of cost and risk. We will evaluate your current internal resources and existing hot-site vendor contracts and capabilities, and match them to your stated RTOs and RPOs. Then we'll help create a hybrid disaster recovery solution that satisfies both your budgetary concerns and risk tolerance.
