At a Glance:

- Comprehensive, organization-wide security education strategy
- Customized security awareness programs
- Secure application coding and system development courses
- Outstanding prep courses for professional and product certifications
- Classroom, web-based, or blended training approach

Develop Your Most Important Information Security Asset

Your most important information security asset is...your people. That is, *if* they are aware of security issues and of their role in protecting information. With access to sensitive data online, on paper, and in conversations, members of your organization—from the boardroom to the mailroom—need to know how to integrate security into their daily work habits and responsibilities. To develop the human factor of information security, you need clearly communicated policies, well-informed employees, and a security team with extensive product expertise and professional certifications.

The right mix to meet the unique needs of your organization

At Forsythe, we go beyond our security advisory and integration services to provide your organization with comprehensive corporate security education. We'll work with you to assess your existing security programs and develop an education strategy and curriculum tailored to your needs. From corporate-wide awareness programs to product training courses to professional certification preparation, we can provide the right level of security education for your employees.

Customized Awareness Programs

Security awareness is essential in order for security policies and practices to take hold. Recruit the members of your organization to your security efforts through an awareness program that is scalable, informative, and inviting. Forsythe will assess your organization's existing level of security awareness to uncover gaps and weaknesses. Then, we'll work with you to design a compelling awareness program, with an eye toward compliance requirements specific to your industry. Communication vehicles such as intranet

sites, emails, DVDs, posters, contests, and special events can be combined to create an attention-grabbing awareness program that reinforces your information security goals.

Awareness programs may cover the following topics such as:

General security awareness. Password hacking, dumpster diving, social engineering...these are just some of the security threats faced by virtually every organization. Forsythe will work with you to customize a security awareness program that teaches your employees practical ways to mitigate these threats and protect sensitive data.

Policy awareness. You have information security policies...but are they known, applied, and reinforced? Using learning management technology, we can help you design a program to disseminate, communicate, and reinforce your policies in a way that is clear and understandable, and ensure that they are acknowledged by employees in an auditable fashion.

Compliance awareness. The need for IT security controls has grown over time with regulations such as Sarbanes-Oxley (SOX), the Health Insurance Portability and Accountability Act (HIPAA), the Payment Card Industry Data Security Standard (PCI DSS), and state legislation. We'll work with you to design a program that heightens awareness of these compliance requirements.

Security Courses

Available onsite at your organization, or at one of our authorized training locations in Atlanta, GA; Charlotte, NC; Chicago, IL; Dallas, TX (Plano); Parsippany, NJ; Tampa, FL; and the Washington, DC area (Rockville, MD).

Security Awareness 101

Security Awareness 101 gives an overview of information security issues and threats, important preventive measures, and basic incident response. Your employees will come away with a better understanding of the key role they play in information security, and how they can best support the information security goals of your organization. This course can be tailored to the needs of specific departments such as sales, IT, help desk, and human resources, and it provides a great foundation for an ongoing security awareness program.

Secure Application Coding and System Development

Insecure design of applications and systems can lead to security breaches—and Forsythe can help you mitigate that risk through our customizable Secure Application Coding and System Development course. Forsythe will assess your developers' level of security knowledge and provide a training program based on industry best practices. Courses will cover security throughout the application and system lifecycle, from developing requirements and specifications to retirement of code and systems.

Get the Forsythe Advantage.

For more than 35 years, Forsythe has delivered forward-thinking advice, technology, and operation-enhancing solutions. As an independent advisor, Forsythe can help you address every aspect of your infrastructure, including how new solutions may affect the bigger picture. Working with every major provider, Forsythe acts as your single point of contact for managing the cost, effectiveness, and risk related to your information systems.

Let Forsythe Help.

Business objectives—and business issues—don't exist in a vacuum. Forsythe identifies and addresses IT interdependencies to deliver solutions that work across your enterprise. Call us today.

Professional Security Certification Education

Authorized Provider: (ISC)² Education Affiliate

To provide first-class security, your security team needs first-class professional certifications. Forsythe provides outstanding professional certification preparatory courses taught by (ISC)² certified instructors. As an (ISC)² Education Affiliate, we offer courses for Certified Information Systems Security Professional (CISSP), Systems Security Certified Practitioner (SSCP), and Certification and Accreditation Professional (CAP). Additional courses can be provided upon request.

Security Product Certification Training

Authorized Training Center for Check Point, Citrix, Nokia, and RSA

Forsythe offers you the highest quality training for Check Point, Citrix, Nokia, and RSA products. We are also a training provider for Cisco, Microsoft, Symantec, and VMware.
