

Information Security Solutions

Data Security & Privacy

Manage and Secure Information Strategically

Data security is the foundation for protecting your company's information assets. Privacy for that information is essential to maintaining trust with customers, partners, and employees. Forsythe's Data Security & Privacy solutions help you strategically manage risks to your information throughout its lifecycle. From data creation to data in flight or at rest, our goal is to ensure that your business processes and data handling techniques are supported by strong security controls. Forsythe can provide expertise in the areas of content security, mobile security, data loss prevention (DLP) and encryption solutions, as well as effective data discovery and classification that will satisfy internal business needs and legal eDiscovery requirements.

Respond to a Changing Business Environment

The quantity of your business information is increasing, as are ways to access it from inside and outside of your enterprise. While information portability, business process decentralization, and workforce mobility present new opportunities, they also pose new hazards. The complexity of information security risks associated with the way we do business can seem overwhelming.

Forsythe can help you understand where your information resides, which information is the most critical, and who has access. We will allow you to securely manage and protect the information your business needs to be successful.

From updating policies and procedures to analyzing and augmenting your security technology and architecture, Forsythe will recommend an actionable plan for improved data security and privacy based on industry standards, best practices, vulnerability intelligence, and over 35 years of security and IT infrastructure experience. And, we will be there to guide you every step of the way.

At a Glance:

- Understand where your critical data resides and how to secure it.
- Develop an actionable roadmap to ensure the protection of sensitive information throughout its lifecycle.
- Implement information-centric Data Security & Privacy solutions leveraging the expertise of Forsythe's cross-practice capabilities.

The Forsythe Approach

Forsythe's Data Security & Privacy services help you cover the full range of data security and privacy needs throughout the information lifecycle:

- **Discover:** Identify the location of sensitive data across your organization.
- **Classify:** Classify business data based on security, business, and regulatory requirements
- **Analyze:** Assess and improve security controls and processes, from monitoring and blocking data in transit, to selecting encryption solutions, to ensuring secure application development.
- **Architect:** Assess and upgrade security architecture to see where it can benefit from the integration and deployment of new technologies.

Forsythe's comprehensive services, OEM partnerships, and expertise in organizational analysis, procurement, technology implementation and training ensure a strategic plan designed to work for your employees and align with your company's business objectives.

Forsythe's Core Competencies and Offerings for Data Security & Privacy

Advisory Services

Forsythe allows you to develop a security strategy that identifies security requirements and technical vulnerabilities, documents policies and standards, and is aligned with industry and compliance mandates.

Forsythe is an authorized Payment Card Industry (PCI) Data Security Standard vendor, and is qualified to perform authorized network scans (Authorized Scanning Vendor) and security audits (Qualified Security Assessor) required by this standard. In addition, we are CIPP, CISSP, CISM, and CISA certified.

- Data Classification Policy
- Content Security Management
- eDiscovery
