

Information Security:
Security Program & Audit

Security Policy Review & Development

Create a Foundation that Protects Your Information

Your security policy is a representation of your organization's strategy and commitment to protecting its information assets. Whether your goal is to update policies, develop a high-level security policy, or develop specific policy statements, Forsythe's process builds consensus for your policy with input from internal stakeholders. The outcome is a durable and complete enterprise security framework that can satisfy audit findings, meet current and future regulatory mandates, and provide a roadmap for your security program.

Create Policies That Grow with Your Business

A clear and comprehensive security policy is the best way to document and communicate a security program. Reviewing, documenting, and developing security policies, roles, and technical standards is essential to demonstrating compliance with regulations and to meeting audit recommendations.

Forsythe's experienced policy writers will assess and compare your current policies against best practices within your industry. We also evaluate your policy requirements against standards for information security, applicable regulations, and their ability to meet your organization's internal security objectives. With that context, Forsythe provides recommendations and an actionable plan to develop policies, procedures, standards, or guidelines that are tailored to your enterprise's structure, culture, and workforce. We work with you to modify existing policy documents or to create new policies where they are needed.

At a Glance:

- Promote compliance and audit-readiness with security policies that meet industry, regulatory, and business requirements.
- Document the guiding principles of your security program.
- Clarify roles and responsibilities.
- Promote security awareness.

Forsythe understands that as your organization evolves, your security policies must evolve as well. We help you to develop security policies that can be adapted to future business or compliance requirements. In addition, Forsythe can provide regularly scheduled reviews to help you ensure that your policies remain effective and up-to-date.

Specific Policies That Target Your Needs

Today's enterprise requires many types of policies and procedures to meet specific needs. For example, an "Acceptable Use" policy will describe the appropriate use of information systems, the Internet, e-mail, and other business resources. Security Incident Response plans and procedures detail specific steps and responsibilities for security events or breaches. Data Classification policies specify how information will be categorized, retained, protected, and handled based on its sensitivity and value.

Forsythe will evaluate your objectives and create policies that satisfy the unique requirements of your business.

Meet the Highest Standards

To be truly effective, security policies must be aligned with industry standards and the unique security requirements of your organization. Forsythe leverages the ISO 27002 standard as a primary security guideline, as well as other industry standards such as COBIT and NIST for additional considerations. By measuring policies against these broad and accepted best practices, we help you maintain compliance with regulations such as HIPAA, GLBA and PCI.

Forsythe's Information Security Solutions

Forsythe draws on our unique industry experience and capabilities to help you secure information as it enters your organization, circulates, is stored, and is sent to your customers, partners, and employees. Forsythe's comprehensive solutions, and our strong relationships with top-tier OEM partners help you balance information security, privacy, compliance and audit requirements with your need for information availability and access. We leverage over 35 years of experience as a leading independent provider of IT-infrastructure solutions to help our customers securely manage information across the enterprise and optimize their technology investment.

Get the Forsythe Advantage.

For more than 35 years, Forsythe has delivered forward-thinking advice, technology, and operation-enhancing solutions. As an independent advisor, Forsythe can help you address every aspect of your infrastructure, including how new solutions may affect the bigger picture. Working with every major provider, Forsythe acts as your single point of contact for managing the cost, effectiveness, and risk related to your information systems.
