

Information Security Solutions

Security Program & Audit

At a Glance:

- Assess your current security program and its ability to address future challenges.
- Develop strategic security policies and build a solid foundation for ongoing information security throughout the information lifecycle.
- Synchronize your security program with compliance and audit requirements.
- Keep your program current and effective through threat intelligence and regular reviews.

A Foundation for Success

Your security program is the framework that supports your organization's business objectives for security. By documenting these objectives within security policies and communicating their guiding principles through awareness, program monitoring and incident response, your enterprise will be better able to adapt to the dynamic business and regulatory environment. Forsythe's Security Program & Audit services will build and maintain a robust, responsive security program aligned with business growth and objectives, industry developments, audit requirements and an ever-changing landscape of security and privacy challenges.

How Secure is Your Business?

A well-designed and comprehensive security program builds a foundation for compliance with government regulations, industry and market requirements, and internal corporate policies.

Forsythe's certified experts will assess and compare your current security program against best practices within your industry. We then provide recommendations and an actionable plan to address any areas that need improvement. We can also use this information to assist you in building a strategic framework for security and privacy.

In addition, Forsythe will facilitate the review and enhancement of your organization's security program, including such areas as:

- Policies, standards and procedures
- Secure business processes
- Corporate governance and audit requirements
- Security technology architecture, controls, and monitoring
- Product training for your technology staff
- Security-awareness training and education for employees throughout your organization

The Forsythe Approach

Forsythe understands that, as your organization grows and evolves, your security program must grow and evolve as well. We work with you to prepare and implement a security program that is flexible enough to adapt to future business or compliance requirements, but is tailored to the unique aspects of your enterprise's structure, culture, and workforce.

We work with you to draw on expertise from all areas of your organization—such as compliance and audit, legal counsel, human resources, and physical security—to help ensure that all of the components of your program are in sync with security requirements. Our experience shows that this approach facilitates the essential internal support needed to be successful.

Forsythe's commitment extends beyond the implementation, knowledge transfer, and hand-off of your security program. Your organization's long-term security goals are our priority. Forsythe can provide a regularly scheduled analysis and review of your program. This process will help keep your program effective and able to respond to changes in audit requirements, regulations, and the broader security landscape.

Forsythe's Core Competencies and Offerings for Security Program & Audit

Advisory Services

Forsythe allows you to develop a security strategy that identifies security requirements and technical vulnerabilities, documents policies and standards, and is aligned with industry and compliance mandates.

Forsythe is an authorized Payment Card Industry (PCI) Data Security Standard vendor, and is qualified to perform authorized network scans (Authorized Scanning Vendor) and security audits (Qualified Security Assessor) required by this standard. In addition, we are CIPP, CISSP, CISM, and CISA certified.

- Security Roadmap
- Information Security Policy Review and Development
- Technical Security Standards Review
- Information Security Strategy Framework and Compliance Mapping
- Incident Management Review and Development
- Vulnerability Assessment: Internal, External, Web and Database

Architectural Services

Forsythe analyzes your security architecture to determine your current security state, understand your infrastructure requirements and needs, and provide appropriate recommendations to either improve upon or deploy new security controls.

- Security Architecture and Controls Analysis
- Vulnerability Management Gap Analysis
- Database and Web Application Security Gap Analysis

Procurement & Fulfillment

Forsythe's strong network of partner relationships and our vendor-independent approach mean that you receive the very best security solution to support your business goals.

- Forsythe's strong industry partner relationships include over 75 security vendors

Implementation & Integration

Forsythe's staff of fully-certified product specialists and solution architects implements the solutions that address your security needs. We provide you with a single point of contact for technology evaluation, acquisition, and deployment. In addition, we help you manage your IT acquisitions and infrastructure, including financing and portfolio management.

- Asset Management
- Configuration Management
- Vulnerability Management & Intelligence
- Threat Intelligence
- Database Monitoring
- Web Application Monitoring
- Forensic Tools

Security Training & Education

Security training and education are an integral part of your security program. Forsythe's educational offerings can be tailored to your organization and delivered independent of a technology implementation. Classes can be held at our Authorized Training Centers, or onsite at your organization.

- Security Awareness Training
- Comprehensive Security Product Training
- Authorized Training Center for Checkpoint, Citrix, and Nokia
- Training Provider for Other Security Partners
- Training Locations in the US and Canada
