

Security Fact Sheet

Information is the most valuable asset in a competitive marketplace. Do you know where your data is today and how it is being secured? Forsythe takes a data-centric approach to help organizations secure their information assets.

Information security has evolved from building walls around networks and the data center to an approach that promotes lifecycle data management. Simply identifying and patching vulnerabilities is no longer an effective strategy. The inability to manage information is the ultimate vulnerability.

Forsythe draws on our unique industry experience and capabilities to help you secure information as it enters your organization, circulates, is stored, and is sent to your customers, partners, and employees. Forsythe's comprehensive solutions, and our strong relationships with top-tier OEM partners help you balance information security, privacy, compliance and audit requirements with your need for information availability and access. We leverage over 35 years of experience as a leading independent provider of IT-infrastructure solutions to help our customers securely manage information across the enterprise and optimize their technology investment.

Data Security & Privacy

Data security is the foundation for protecting your company's information assets. Privacy for that information is essential to maintaining trust with customers, partners, and employees. Forsythe's Data Security & Privacy solutions help you strategically manage risks to your information throughout its lifecycle. From data creation to data in flight or at rest, our goal is to ensure that your business processes and data handling techniques are supported by strong security controls. Forsythe can provide expertise in the areas of content security, mobile security, data loss prevention (DLP) and encryption solutions, as well as effective data discovery and classification that will satisfy internal business needs and legal eDiscovery requirements.

Compliance & Standards

Regulatory and industry compliance requirements have helped to shine a light on the role of information security throughout the organization. In today's increasingly regulated business environment, you need to ensure that your enterprise meets the compliance expectations of regulatory bodies, auditors, partners, and customers. Forsythe's Compliance & Standards solutions facilitate your alignment with legislation such as HIPAA, SOX, and GLBA, and industry standards such as PCI, ISO, COBIT and NIST. We work with you to develop a solid compliance posture for your enterprise.

Access & Identity Management

Organizations today face the complexities of providing secure and properly authorized access to mission-critical data for an increasingly decentralized and mobile set of users that includes employees, contractors, vendors, partners, and customers. This requires a finely-tuned balance between accessibility and controls that won't impede productivity. Forsythe's Access & Identity Management offerings address the dynamics of secure data access by developing and implementing solutions to manage user identities and access strategies that protect your enterprise's data resources.

Security Program & Audit

Your security program is the framework that supports your organization's business objectives for security. By documenting these objectives within security policies and communicating their guiding principles through awareness, program monitoring and incident response, your enterprise will be better able to adapt to the dynamic business and regulatory environment. Forsythe's Security Program & Audit services will build and maintain a robust, responsive security program aligned with business growth and objectives, industry developments, audit requirements and an ever-changing landscape of security and privacy challenges.

Forsythe Security Solutions Core Competencies

Advisory Services	Architectural Services	Procurement & Fulfillment	Implementation & Integration	Security Training & Education
