

# From the boardroom to the data center, Forsythe helps organizations solve business problems through technology.

As an IT infrastructure integrator focused on outcomes, we help our clients optimize the cost and manage the risk of their IT while improving performance.

We can help you assess, design, procure, build and support your IT infrastructure throughout the technology lifecycle. We identify and address IT interdependencies to deliver solutions that work across your enterprise.

With our independent, multi-vendor perspective, we help you simplify IT acquisition and integration in today's complex infrastructure marketplace.

## The Forsythe Story

Since 1971, Forsythe has earned the trust of many of the top names in business in North America. Our team is comprised of specialists in every facet of IT strategy, to help clients build cohesive infrastructures that will serve them well over the long term.

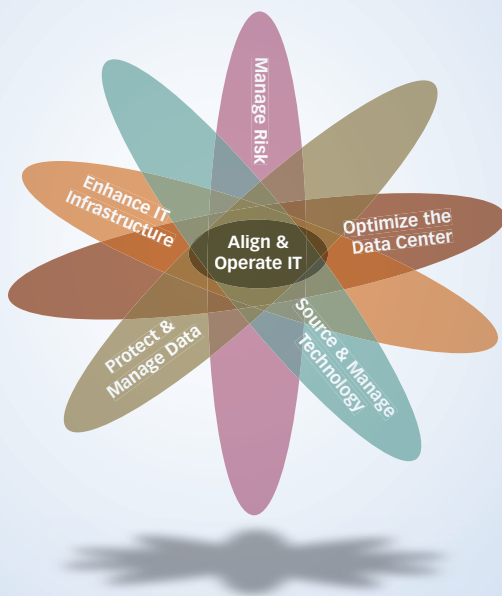

We work with organizations across all industries, including one-third of Fortune 100 companies and many others in the Fortune 1000. Forsythe acts as an independent advisor, offering a full range of consulting services that focus on meeting organizations' larger business objectives. In addition, we serve as a single

technology resource, providing everything from assessment and design to products, financing, and portfolio management.

Forsythe is 100-percent employee-owned and strongly committed to developing solid, long-term relationships with its clients and partners.

Forsythe has achieved 40 years of consecutive profitability by adapting to meet the changing needs of business. As a result, our clients and partners know they can count on an enduring relationship that will see them through the long run.

Forsythe has 50 offices throughout the United States and Canada.

## Forsythe helps you meet key business objectives, including:

**Aligning & Operating IT** - Helping gauge and advance operational maturity to ensure that your IT services add value and meet business objectives cost-effectively.

**Managing Risk** - Helping organizations close the gap between their expectations for security, availability, privacy and compliance preparedness and IT's ability to respond.

**Protecting and Managing Data** - Developing a successful information management and storage framework that satisfies all levels, from executives to system administrators.

**Optimizing the Data Center** - Ensuring that data centers are located and designed to meet ongoing business goals, even after moves or mergers or in the face of a disaster.

**Enhancing IT Infrastructure** - Taking an infrastructure-wide view of your overall IT system's effectiveness and helping position your organization for future growth and change.

**Sourcing and Managing Technology** - Helping you take a holistic approach to sourcing, financing and maintaining technology to minimize cost and risk.
